

SSEH Series

Radius Endmill for Exotic Alloys

SUMITOMO

CARBIDE - CBN - DIAMOND

Characteristics

Excellent Cutting Performance and Chip Evacuation

Large Helix angle (45 degrees) is used to improve cutting performance while providing smooth and steady chip evacuation.

High Tool Rigidity

The optimized web thickness and the shape and size of the flute provide tool rigidity and excellent chip evacuation.

Improved Adhesion Resistance

The semi-mirrored surface and the advanced coating technology improve adhesion resistance and wear resistance.

Improved Fracture Resistance

Smooth radius shape mitigates cutting impact and improves fracture resistance.

Adoption of New Coating

Ultra-smooth coating with significantly improved coating hardness and heat resistance improve tool life in heat resistant alloy machining.

General Features

- Radius endmill for exotic alloys
- Titanium alloy and heat resistant alloy can be machined easily
- Large helix angle (45 degrees)
- Adhesion is reduced by special coating with almost mirror like surface
- The hard substrate and improved coating hardness enable higher tool life
- New radius endmill SSEHVL anti-vibration type achieves more stable machining

Large helix angle

Smooth radius shape

Series Selection Guide

Design	No. of Teeth	Diameter ØD _c (Min~Max)	Cat. No.	Grade	Coating	Appearance

Recommended Cutting Conditions

For stable machining, a high rigidity machine is recommended.
Wet machining is recommended for stainless steel and heat resistant alloy applications.
If cutting noise and vibration occur modify the cutting conditions accordingly.

Characteristic of Anti-Vibration Type

New anti-vibration type added to the endmill series SSEH for exotic materials.

Builds on the same features of existing endmills by adding an irregular lead for exceptionally good anti-vibration performance.

Compatible with milling for wide range of exotic alloys including stainless steel, inconel and titanium.

Reduces chattering for high-speed, high-feed cutting.

Application Examples

Corner Finishing of Titanium Alloy

	SSEH Radius Anti-Vibration Type SSEHVL 4120W 30	Endmill without Anti-Vibration Mechanism Ø12 x R3,0
Machined Surface	 No vibration	 Vibration
Vibration Data	 Stable milling	 Vibration at entry point
Detail of Milling Edge	 No chipping	 Chipping due to vibration
Cutting Data	$v_c = 42,4\text{m/min}$ ($n = 1.125\text{min}^{-1}$) $v_f = 200\text{mm/min}$ ($f_z = 0,044\text{mm/t}$) $a_p = 5,0\text{mm}$, $a_e = 12\text{mm}$, wet	

Radius Endmill SSEH Series

Application Examples

Inconel 713

SSEH 4100W R10

Competitor's

In Sumitomo tests the special coating with excellent adhesion resistance provided less cutting edge adhesion than the competitor's product and enabled fracture-free machining. The competitor's product suffered from edge adhesion leading to breakage.

Cutting Data: $v_c = 32\text{m/min}$, $f_z = 0,018\text{mm/t}$, $a_p = 20\text{mm}$, $a_e = 0,8\text{mm}$, dry
Diameter: $\varnothing 10 \times R1$
Tool Life: 150 pcs

Inconel 713C

SSEH 4080W R05

Competitor's

The SSEH type was able to be operated continuously without chipping by combination of the special rigid substrate and the smooth radius shape. In contrast the competitor's product resulted in chipping.

Cutting Data: $v_c = 6\text{m/min}$, $f_z = 0,025\text{mm/t}$, $a_p = 0,5\text{mm}$, $a_e = 6\text{mm}$, wet
Diameter: $\varnothing 8 \times R0,5$ (Special tool)
Cutting Length: 120mm

X5CrNi1810 (Stainless Steel)

SSEH 4060W R10

Conventional

In dry machining where good heat resistance is required, the sharp edge reduces heat generation. The conventional tools resulted in boundary chipping. The SSEH type was able to be operated continuously up to the cutting length of 70m.

Cutting Data: $v_c = 50\text{m/min}$, $f_z = 0,04\text{mm/t}$, $a_p = 5\text{mm}$, $a_e = 1\text{mm}$, dry
Diameter: $\varnothing 6 \times R1$
Cutting Length: 20m
